DEPARTMENT OF ULTRASOUND

Ultrasound Abdomen and Pelvis

LIVER is normal shape, size (12.9 cms) and has uniform echopattern. No evidence of focal lesion or intrahepatic biliary ductal dilatation. Hepatic and portal vein radicals are normal.

GALL BLADDER well distended. Intraluminal calculus measuring ~ 10 mm in neck of gall bladder - S/o Cholelithiasis.
Circumerential wall thickening (maximum thickness ~ 3.5 mm) - Cholecystitis.
No pericholecystic collection.
Evidence of iso to hypoechoic thick wavy membrane within gall bladder lumen - Likely sloughed off membrane. CBD is of normal calibre.

PANCREAS has normal shape, size and uniform echopattern.
No evidence of ductal dilatation or calcification.

SPLEEN shows normal shape, size (8.7 cms) and echopattern.

KIDNEYS move well with respiration and have normal shape, size and echopattern.
Cortico- medullary differentiations are well madeout. No evidence of hydronephrosis.
Right kidney measures: 9.1 x 3.7 cms, Left kidney measures: 9.1 x 3.9 cms.
Calculus measuring 12 mm noted in lower pole of left kidney.

URINARY BLADDER Well distended. Circumferential bladder wall thickening ~ 3.4 mm with low level internal echoes - S/o Cystitis.

UTERUS measures 5.2 x 2.5 x 3.0 cms, post menopausal status. Anteverted.
Endometrial echo is of normal thickness 3.5 mm.

OVARIES are not visualised.

No evidence of free fluid in the abdomen and pelvis.

Anterior abdominal wall defect measuring ~ 1.2 cms in umbilical region with omental fat as its herniating content.

Patient Name	: Mrs SUBHA	MR#	: 2350657
Age / Gender	: 49 Year(s) / Female	Ordered By	: CPL-TS-303
Ref. Doctor	:	Sample Drawn Date	: 2026-02-13 00:00
Ref. Customer	:	Registration Date	: 2026-02-13 23:18
Sample & SID	: WB - EDTA - 3562629	Report Date	: 2026-02-16 13:43

MOLECULAR BIOLOGY

TEST DESCRIPTION	RESULT	UNITS	BIOLOGICAL REFERENCE RANGE
HCV QUANTITATIVE (Method: ABI real time PCR using Taqman Chemistry)			
HCV RNA Quantitative (Method: ABI real time PCR using Taqman Chemistry)	**1740 IU/ml**	IU/mL	17.1 - 34364262 IU/ml 100 - 200000000 copies/ml

DETECTED.

Interpretation:

Hepatitis C virus (HCV) is an enveloped, positive-sense single-stranded RNA virus of the family Flaviviridae. HCV causes viral hepatitis in humans. The virus shows high genetic diversity with 7 genotypes and many subtypes.

RT – PCR (Quantitative): Real time PCR is a sensitive, accurate and efficient method for detection and quantification of Hepatitis C viral RNA in specimen. HCV RNA is isolated from specimen and amplified using primers and probe based on Taqman Chemistry. The sample is co amplified with an internal control and the Ct (Threshold cycle) value of PCR profile is compared to HCV standards to derive the viral copy no. The viral load provides an accurate estimate of the levels of HCV in specimen. Using this assay it is possible to detect HCV viremia prior to immunological sero-conversion and to detect the fluctuation of viremia in antibody- positive chronic HCV patients undergoing therapy. The viral load assay is a good predictor of disease progression and it helps the physicians to make their choices about appropriate treatment strategies.

Detection and quantification of HCV RNA in serum are useful to:
* Diagnose some cases of early acute HCV infection (before the appearance of Anti HCV)
* Distinguish active from inactive HCV infection
* Monitor a patient's response to anti-HCV therapy

CLINICAL BIOCHEMISTRY

TEST DESCRIPTION	RESULT	UNITS	BIOLOGICAL REFERENCE RANGE
Liver Function Test 2021			
Bilirubin Total	0.81	mg/dL	Adult: 0.3-1.1 0-1 Day: 1.4-8.7 1-2 Days: 3.4-11.5 3-5 Days: 1.5-12.0
Bilirubin Direct	0.25	mg/dL	<0.30
Bilirubin Unconjugated (Indirect)	0.56	mg/dL	0.1-1.0
Alkaline Phosphatase (ALP)	**142**	U/L	Adult: 30-120 0-1 years: 75-383 2-9 years: 104-315 10-15 years: 42-390 16-18 years: 52-171
Alanine amino Transferase - (ALT / SGPT)	**230**	U/L	16-63
Aspartate Aminotransferase (AST/SGOT)	**101**	U/L	15-37
Total Protein	7.18	g/dl	6.6 - 8.3
Albumin	3.84	g/dL	3.5-5.2
Globulin	3.3	g/dL	2.0-3.5
Albumin/Globulin Ratio	1.2		0.8-2.0
Gamma Glutamyl Transferase (GGT)	**103**	U/l	< 38

IMPRESSION:

*** Cholelithiasis with cholecystitis.**

*** Iso to hypoechoic thick wavy membrane within gall bladder lumen - Likely sloughed off membrane (Possibility of Gangrenous cholecystitis).**

*** Non obstructive left renal calculus.**

*** Cystitis.**

*** Umbilical hernia with omental fat as its content.**

Suggested clinical correlation and follow up

Study Performed at Tenet Diagnostics Banjarahills, Hyderabad.
